# EDGE and the Brazilian Navy Strengthen Strategic Cooperation in Cyber Defence Capabilities

- *This initiative represents another significant milestone in EDGE's already well-established relationship with the Brazilian Navy*

**São Paulo, Brazil/ Abu Dhabi, UAE:** EDGE, one of the world's leading defence and advanced technology groups, and the Brazilian Navy have signed a Memorandum of Understanding to establish a framework for cooperation aimed at assessing and strengthening the cyber protection capabilities required by the Navy. The signing ceremony was at LAAD Security 2026, held in São Paulo from 14 to 16 April.

The agreement establishes the foundation for technical, operational, and logistical discussions, with the objective of exploring solutions across several priority areas for the Brazilian Navy, including the development of an operational concept for the implementation of a strategic cyber defence unit; the engineering and development of cyber monitoring and protection tools; the enhancement of operational technology cybersecurity in maritime environments, and the training and development of human capital dedicated to safeguarding the cyber spaces of interest to the Brazilian Navy.

In recent years, the importance of cyber defence has grown rapidly, particularly with regard to the protection of critical infrastructure. As governments, militaries, and key industries increasingly rely on interconnected digital systems, safeguarding networks, operational

technology, and information assets has become a strategic priority.

The initiative underscores the shared commitment of EDGE and the Brazilian Navy to enhance the security of critical information systems, foster knowledge exchange, and develop advanced technological solutions to safeguard maritime cyber environments.
