

EDGE Debuts Multi-Domain Defence Capabilities at DALO Industry Days 2026

- *EDGE Europe's showcase spans loitering munitions, counter-UAS solutions, a naval patrol vessel, and an end-to-end electronic warfare portfolio*
- *Participation in Scandinavia's largest defence industry exhibition marks a further step in building an industrial presence across the continent*

Abu Dhabi, UAE: EDGE Europe will participate in DALO Industry Days 2026, Scandinavia's largest defence industry exhibition, at MCH Messecenter Herning in Denmark from 19 to 20 August. Hosted on behalf of the Danish Defence Acquisition and Logistics Organisation, the two-day exhibition brings together the Danish Armed Forces, defence organisations, and industry from across the land, maritime, air and space, cyber, and security sectors, and marks a further step in EDGE Europe's engagement with defence stakeholders across the continent.

Miles Chambers, Senior Vice President – International Business, said: "DALO Industry Days brings us directly to the defence community in Scandinavia, and that matters as EDGE Europe builds out its presence across the continent. What we are presenting in Herning reflects the breadth we can offer European customers across the air, maritime, space, and [electronic warfare domains](#), drawn from systems developed for demanding operational environments. Our approach in Europe is to build alongside local industry, and exhibitions such as this are where those partnerships begin."

EDGE Europe will present loitering munitions designed for precision engagement against fixed targets in both rapid-strike and long-endurance configurations, alongside an interceptor developed for the precision neutralisation of adversary unmanned aerial vehicles (UAVs). In the sea domain, EDGE Europe will feature a platform equipped for littoral and blue-water operations with capabilities that enables warfare across the air, surface, and sub-surface dimensions.

Across the electromagnetic spectrum, the display spans counter-unmanned aerial system (C-UAS) detection, jamming, and spoofing, border and infrastructure protection fusing integrated sensors, anti-jamming modules, and an airborne cellular system supporting search and rescue. Completing the line-up is an AI-powered command, control, communications, computers, and intelligence (C4I) system, harnessing the power of AI to revolutionise space intelligence.

EDGE Europe's presence in Herning follows a period of rapid establishment across the continent. EDGE Europe was launched as a fully European, French-registered enterprise headquartered in Paris.

Visitors can explore EDGE Europe's full capability offering at stand U 2100.
