EDGE to Provide Advanced Secure Communications System for the Brazilian Ministry of Defence’s CENSIPAM Agency

EDGE, one of the world's leading advanced technology and defence groups, and the Management and Operational Centre of the Amazon Protection System (CENSIPAM), an agency of the Brazilian Ministry of Defence dedicated to the management and protection of the Legal Amazon and Blue Amazon, have signed a letter of intent confirming CENSIPAM’s interest in acquiring an ultra-secure communications system. The system will be deployed in partnership with SIATT, a Brazilian specialist in smart weapons and advanced defence systems, in which EDGE holds a 50 percent stake.

The secure communications system integrates EDGE’s KATIM X3M ultra-secure smartphone and SIATT's SATCOM link and command and control software, with radios from the Brazilian Military Material Industry.

Utilising an open-architecture structure, the system permits the integration of associated technologies to enable interoperability and the exchange of information. As a tailored solution, the system has strong applications for EDGE’s customers in Brazil and Latin America that require reliable and highly secure communication in challenging and remote operational environments.

CENSIPAM and SIATT ratified the delivery through the letter of intent signed at Mostra BID Brasil, being held in Brasília, until 5 December 2024.
